

# GIS

geographic information system

GEOMATICS

Geographic Information System (GIS) technology is an indispensable companion service to planning, design, and facilities and infrastructure management. When integrated with mobile field data collection and work order solutions and well-planned departmental work flows, GIS capabilities can greatly increase efficiencies throughout an organization.

WithersRavenel helps clients develop and implement GIS for mapping, modeling, and data storage. We provide the necessary support to make a successful GIS system, including purchasing and configuring software; establishing network and internet connections; and developing databases and work flows. We also provide extension-of-staff services like training and on-call support to enable our clients to derive the greatest benefits from the systems they have adopted.

With a comprehensive GIS solution in place, our clients are able to make more informed decisions and protect their infrastructure investments.

## OUR SERVICES

- ▶ Utility Asset Inventory
- ▶ GIS Implementation
- ▶ Data Services
- ▶ Support & Training
- ▶ Cartography
