UTILITIES

Water availability for drinking, sanitation, fire flow, manufacturing, and irrigation drives development and economic growth. WithersRavenel helps communities understand and manage their water resources so that they can support the development of homes, schools, hospitals, and businesses in an environmentally responsible way.

Funding the replacement of aging water infrastructure and the construction of new facilities can be difficult. Costs cannot simply be passed on to the consumer and a water utility must operate within its financial constraints. By working with clients to develop a fiscal roadmap made up of federal and state grants and loans, we help make water improvements affordable for more people in more places.

OUR SERVICES

- ▶ Fire Hydrant Flow
- ▶ Horizontal Directional Drilling
- ▶ Hydraulic Modeling
- ▶ Preliminary Engineering Report
- ▶ Pump Stations
- ▶ Treatment Plants
- ▶ Water Supply System
- ▶ Elevated & Ground Water Tanks
- ▶ Wells
- ▶ State Funded Grants & Loans
- ▶ USDA Grants & Loans
