## State-Funded GRANTS & LOANS

The Federal Government and the State of North Carolina provides grants and low-interest loans to local governments and certain non-profit entities for water, sewer, and stormwater infrastructure through a number of programs. Navigating these programs, with their myriad requirements and deadlines, can be challenging for communities that are already constrained by limited resources.

WithersRavenel can supplement these resources, leveraging our experience with grants and loans to apply for and administer these vital funds. From identifying suitable programs and gathering data through performing preliminary engineering and preparing applications to filing status reports, reimbursement requests, and finally close-out documentation, we aid clients in improving their infrastructure for sustainable long-term operation.
